

Activation Nature Park Steinwald DLFF-119 02.may 2010

A group of members from the DARC-Ortsverband Stiftland, DOK: U23 made their second DLFF-activation at may, 02 2010.

This time we decided to activate Nature Park Steinwald DLFF-119. Location was in Herzogöd about 730meters asl.

We were using two operating-positions, one in a wooden house directly at the location where also our 433Mhz repeater is working, second position was in a mobile-trailer just twenty meters away. Starting at 0730 UTC with the first QSO with UA9SGQ the begin was very slowly. 20 Meters was in bad shape. On 40 Meters we had extreme problems to get a clean working frequency at all because several contests made it very difficult. Nearly 90 minutes in our working period where absolutely for nothing. No conditions anywhere. So the best band again was 40 Meters where we made approximately 60 percent of all our contacts. Final QSO was exactly 1300 utc with OH6GZ. Thanks to all callers. Log upload will be done in a few days. Special QSL-cards will follow after new design ready and print is done. Altogether 465 QSOs were made. 73, 44, Team DAOCW/p

1. our location with the trailer in front
2. Xaver -DK4RM- at station one
3. Manfred -DF6EX- at station two
4. Using FT990 and FT2000 plus wire-antennas
5. Günther -DC2RK- and Karl -DL4RU doing some antenna-preparations

Against our normal clubstation-QSL this time we designed a special one for WFF-activities.

So all 460 contacts will be confirmed when arrived from the printer at the end of June via the buro.

Front picture shows a typical meadow-wood combination from one of our surrounding national-

parks. Picture on the backside shows the "Burgruine Weissenstein" located in DLFF-119 Nature-Park Steinwald on top of the hill.

Thanks againg to our DA0CW-QSL-manager Heinz -DL7RAG- who finally had to fill out all, hi.
