

Activation Castle of Kynzsvart OK-00273 and OKFF-006 03.july 2011

After having a nice trip to Leuchtenberg my wife and me decided to go also on sunday on a castle-trip. With my OK8WFF-licence it was the Castle of Kynzsvart which was our decision. However con-

on sunny days looking like this

ditions where much bader than a day before. It was raining cats and dogs all the time and it really was not so funny. After arriving near the town of Kynzsvart (between Cheb and Marianske Lazne) a place just before the town was selected. Then a very strong sirene started and minutes later a lot of emergency trucks and police and so one were driving with high speed to the town. So first we thought we need to brake down but then found a position to continue. After the start at 0930 we found that only 18MHz was in good condition and started there with CW and SSB. 14 MHz was very distorted today and brought no high numbers. Altogether we made 136 contacts today in about 2,5 hours which was acceptable under that circumstances. QSL-cards for this activity will go on the way in next weeks bureau delivery. Castle log will be uploaded

OK-00273

to WCA and of course also WFF-log will go to EW4DX. The location is in the nature park „Slavkovsky Les“ OKFF-006. Thank you for the contacts and hope to meet you from anywhere. 73, 44, 11, Manfred DF6EX (OK8WFF/p)

our location just before Kynzsvart
