National-Park Berchtesgaden

Already in 1910 the first area from todays Nationalpark Berchtesgaden was elected with about 8600 ha in the southeastern area, in 1921 it was extended to 20400 ha now including the Nature-Reserve around Lake Königssee. Finally 1978 the Alpine and Nationalpark Berchtesgaden has been finalized to it´s todays size of 20804 ha together with the Biosphere Berchtesgadener Land in the forefront accepted by the UNESCO.

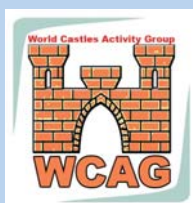

We spent the whole day on 12.july in the National-Park starting in the area around Lake Hintersee on the western end of the park. Our excursion took us around the see through the wooden areas along the magic wood with very interesting and fascinating water and stone-arrangements. We were walking and relaxing till the late afternoon. Personally I nearly had given up the plan to be active also from this park but my xyl

View from Lake Hintersee to the surrounding mountains

proposed when we are here then to maybe try it only for a short activity. We were searching about a better location and found a parking area which was not totally surrounded by wood. At 1612 UTC we were in the air from DLFF-002. Also from this park we had an unexpected high interest, lot of stations were calling on 40 meters after the first cq-call. The path to germany again was a bit difficult. Stations confirmed again a very

high QSB-rate on our signal going up and down rapidly. After working down the calling stations on 40 meters did also a short attempt on 20 meters but here again no good propagation. We worked a few and tried also unsuccessful there in CW and moved back to 40 meters. After 70 minutes also on 40 meter the evening noises were too loud and we started to move down the antenna. Altogether 106 contacts were made from

National-Park Berchtesgaden

this location. After dismantling and packing we started back to our hotel-room and prepare everything for the last step on the next day. As we were living closer to Austria we decided to let the remaining first activation of OEFF-209 for Saturday morning, maps were already prepared to find the destination as quick as possible. So we were ready for number five these days.

Excursion with my co-operator

Logs will be put in the online-database:
