Castle of Fuchsmühl

Castle of Fuchsmühl was first time activated at January 01 at 0 degrees outside. At this time only 40 meter activity happened as temperature was too cold to change antenna outside. This time it was planned to make also more 20 meter activity.

Main-target for the activity was to test some antenna-construction for the coming activity from OKFF-0963. However ideas failed. System was not so usable in the next operation as construction was too instabile. So finally when we ended our tests we came back to our usual antenna-setup and wanted to add some more contacts from the castle.

However it was during the week, so there were not so many stations on that day. So altogether it was not so easy to fill the log that day. Weather was dry and warm when we started. However at the end of the operation temperature was falling rapidly and we decided at 1715 UTC to break down the station and starting back for home. This time further 102 stations made it into the log on 20 and 40 meter in CW and SSB.

Log was already uploaded to the online-db from WWFF, WCA+COTA.
