Castle of Riglasreuth

The Castle of Riglasreuth was built in the year 1407. At this time the original castle was surrounded by water. In 1848 there was a big fire which destroyed beside a large area from the village Riglasreuth also the castle. It was rebuild by knight Karl von Haubner and sold in 1866 to the King of Bavaria. Ac-

tually it´s since six years in private ownership. The new owner reconstruct it since that time together with his family. He plans to live there starting at christmas time. Only the year is not clear yet :-)

For 70th portable-activity got the invitation from my friend Günther DC2RK. His location is not too far away from the Castle of Riglasreuth. Could use his antenna and had an enjoyable pile-up again from there. The location is also valid for Naturepark Fichtelgebirge DLFF-058. Used DAØWCA in SSB and DA0CW/p in CW. Altogether 266 contacts were made in about 2,5 hours of operating time. Thanks to Günther and Hilde for their hospitality. Log was already uploaded to the online-db from WWFF, WCA+COTA.
