National Park Bavarian Forest  
DLFF-0001

On a small daytrip during the holiday, we tried to do some activity from a new DLFF in the area of the bavarian forest. When almost reaching the area, we found that the rest of almost 2 kilometer was not possible. It was the hottest day of the year with almost 38 degrees and the area was over-filled, so we left without any activity from there and instead added some kilometers to the national park Bavarian Forest. We were in Bayerisch Eistenstein on the most northern tip of the national-park.

It was not planned at all and the time wasn't optimum. We started at 0837 UTC with DL5EBG as first caller in the log. So during the week we didn't expect a too big result but finally until 0953 with HA7MS as latest station we

made 168 contacts from DLFF-0001. 27 countries has been worked. When SSB-areas were almost dead some time in CW was spent. Most of the contacts this time were done with Germany, followed by Italy, then Poland at 3rd place

73, 44, 11  
see you next time
