Nature Reserve Fichtelseemoor
DLFF-0289

Another friday afternoon-activity brought me to the nature-reserve Fichtelseemoor DLFF-0289.

Latest activity was 15 months ago so would give the new hunters a chance to get it into the log.

Came out a bit later from work than usually expected, so arrived at the same location like march 2015 but this time under very warm conditions with a lot of mitches, flies and other animals. So only setup station, sit back in the car and don't open a window because quite a lot of wood around.

At 1522 UTC F1BLL called in as the first station. There were extreme bad conditions to the closer areas so only a few ger-

man stations made it that day. Top 1 country was italy followed by Poland and England. Germany reached only fourth place with just 10 contacts. Temperature was extreme hot and so, activity would not last too long.

Operation was in SSB only on 40 and 20 meters however 20 meter especially in very poor shape that time. Finally until 1656 UTC 134 contacts were made before I started for the home-trip the final hour. Last contact was with IZ1HIY.

27 countries were worked from DLFF-0289 which brought the total from this reference up to almost 450 contacts.

73, 44, 11

see you next time,

Manfred DF6EX
