

DAØWCA- 11.06.2016

Nature Reserve Klamm und Kastlhäng + Castle Prunn
DLFF-0303 + DL-02831

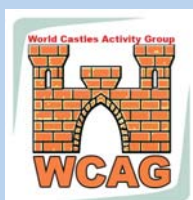

The trip from DLFF-0303 to DLFF-0351 took about 20 minutes for the about 15 kilometers. The location was a bit above the small village of Einthal just on the opposited side of the river were the Castle Prunn resides on a solid rock.

We selected this location to be also in a qualifying distance for the WCA-counter Castle Prunn.

Starting time was at 0838 UTC with IW2BNA on 40 meters as first station.

We soon found out that the propagation was much bader now and the bands were more closing.

There was mostly no cluster-connection and some stations promised but not too many did put a spot in the cluster. So we mostly were waiting until a small num

ber of callers again appeared and then called often minutes without any reply.

There was also a huge and fast fading on the low distance signals. Some areas in germany couldn't be heard at all and just few minutes later signals went up to 59.

So we did the tricky operation for about 1,5 hours and then decided to leave and find a place for the break at midday.

Only 20 countries could be logged from here with Germany and it's 31 contacts on

Nr. 1, close followed by Italy with 30 and Poland with 18 contacts. Altogether 126 contacts could be done and are already in WWFF and WCA-database of course. Last OSO made with DL8NCA at 0955 UTC.

Please again: Don't send a QSL-card yourself, you will get automatically a confirmation from us, but we don't collect QSL-cards anymore !!

73, 44, 11
see you next time
