

DAØCW/p - 11.06.2016

Nature Reserve Wolfsberg bei Dietfurt
DLFF-0352

After our dinner-break in Riedenburg which we made in the same restaurant like at our 2014-trip we started for the last part of the activation-tour.

Along the river Altmühl (Main-Donau-Kanal) we started for the next 20 minutes tour to Dietfurt beside the Wolfsberg.

The beautiful area with a lot of ships and extreme good infrastructure for biking and hiking offers also a lot of archäologic points of interest. Also on top of the Wolfsberg there is a defense wall going back to the Celts in the 7th century.

When arriving in the area we started again a few minutes later as the sky was getting darker and the first contact from DLFF-0352 was with DL1EBR at

1159 UTC. We had here a cluster-connection which was an improvement however the conditions were meanwhile terrible. Only a few contacts in the log and then it stopped abrupt. Conditions on 20 meters were a bit better against the morning but also here not too much callers.

The sky was full with heavy rain-clouds and so we planned to continue as long it was more or less dry. Biggest number of contacts was with Germany and 38, but the second place with Italy (16) and Poland (16) shows that also the countries with the highest rates on 40 meter had almost no condition. So our total result were 124 contacts in exactly 1,5 hours of activity.

We did several band and mode-changes but couldn't bring the score more up. When we built down the antenna di-

rectly the rain started, so time to go.

Finally we could hand out during the whole day
from the three different areas 474 contacts.
Thanks to all callers and listeners on the band.

73, 44, 11
see you next time
