

DAØCW/p - 20.07.2016

Nature Reserve Weichselbrunner Weiher und Trockenkiefernwald bei Bodenwöhr  
DLFF-0393

location in the middle of the wood

On the hometrip from bavarian forest we made a short sidetour in direction of Schwandorf and made there a n activity from DLFF-0393.

Conditions meanwhile were totally terrible. Normally expected in the later afternoon some improvements but not the case.

We startet at 1320 UTC with EA3MP on 20meters but again band in bad shape. So moved back to 40 . Also there in SSB almost nothing so switched to the keyer and since long time this was an activity with more CW (71) contacts than SSB (64).

Since a long time the most frustrating acti-

vity but anyway conditions can´t be changed.

Temperature was again extreme hot and you couldn´t open any door or window as therer was such a high number of insects outside there in the middle of the wood.

So we continued as best we could and finally closed the station at 1444 UTC with SQ5JRH/p in the log. 25 countries got the new multiplier, Nr. 1 went again to Germany with 33 contacts followed by Italy and Poland both with 24 contacts each.
