Castle Schlössl DL-04946
DLFF-0119

My original plan was to go into direction near Neustadt, however then I came out a bit too late and decided to go to a closer castle. This was my third activity from the „Schlössl“, not too far away from Marktredwitz. I selected a free meadow-area a bit above the village. Everything was silent there no electric-fence and no solar arrays. So really clean bands.

At the begin it was not so efficient. First half hour was very poor. But then propogitions improved and especially between 1500 and 1600 UTC this time were much better.

However parts of the closer area had no

propagation like southern germany, austria and switzerland.

On the other side got some interesting DX-stations from PY, HZ, VE and W in the log.

In total could work this time 32 DXCC-countries.

After a very long stay on 40 meters until the band dried out moved to CW and could add there some additional 30 contacts.

Altogether 210 contacts made it into the log.

Top 3 countries this time germany (35), italy (32) and england (21) this time in front of poland (20)
