Haidenaab und Gabellohe  
DLFF-0450

On my latest day of summer-holidays wanted to head out for another short-trip. So choosed DLFF-0450 which was only active once in 2017 and started on a friday-morning in the hope that conditions will be bit better. However nothing. This time choosed a free location on a small pond in the

side-area of the DLFF. Got also a short visit from my team-mate Günter DC2RK who isn't living too far away from there. However 20 meters almost unusable at all. 30 meters produced a short pile-up but only for a few minutes. 40 meters was going up and down. Some stations gave nice signal-reports, 5 minutes later some stations from the same area stated the signal as very small. So absolutely unsteady propagations and also from the major-countries in

europpe not too many callers. Coming to midday I finally gave up and ended the activity with a final-score of 156 QSO. Most contacts with italy (34) followed by france (17) and poland (16). Also this time again very poor into the closer areas like DL, HB, OE, OK.
