Wondreb zwischen Leonberg und Waldsassen
DLFF-0802

This Natura 2000-area follows the stream course of the river Wondreb between the village of Leonberg and the city of Waldsassen. There are large flooding-meadows and ending near the barrage close to Waldsassen. Later river Wondreb ends into the river Eger near OK-border. Found a place which was accessible also under the very muddy winter-conditions there. In the meadows no chance however near the small farm Altenhammer could enter the area on a small side-road. Weather was cold with around 5 degrees however sun was shining and you could stay there without any bigger problems in the car.

Through the side-window you had a small view into the river-bed and also to the farm in the background. However also sometimes distortions from the electric-fence about 200 meters away surrounding the horse-area.

It was not on the whole band, there were some portions with disturbances and 10kc up nothing. So we could deal with. Activity was planned for a maximum of 2,5 to 3 hours as then darkness would come and the temperature going down extreme. So started at 1334 UTC with MMOZBH as first station. Had the days before also some

castle-activities with very poor conditions in phone area on 40 so started this time again in SSB and after a

slow start it finally was opening a bit and could continue with more than 100 stations on the same frequency, before it run out and had to try my luck on other bands . 20 meters again very poor, 30 meters only a short opening and also only small number on 80. So had to switch back to 40 in CW and there was an extreme good run pulling up the logged numbers.

Had the week before an online-meeting with Lars PHØNO where we talked also about the improvement in operating when using more CW. To my biggest surprise he called me for his first human-made CW-contact ever. Very nice Lars to give you a new DLFF with your first CW-QSO, thanks.

Activity lasted until 1630 UTC when S51RU marked the last contact. Altogether 34 countries made it into the log.

First place with big distance went to italy with 65 contacts, followed by Germany 35, Poland 22, France and Ukraine with 17 and Belgium with 15 QSO.

From the mode-side there were 160 contacts in phone and 151 in telegraphy.

In total 311 contacts with 284 unique stations which shows also that there are many stations only in CW as well also many only in SSB.

The power-consumption made almost 50% of the battery-capacity however never any problem as I always would have also a second one with me.

Thanks for calling in and cu soon on the bands, stay healthy.
