Nature-Park nördlicher oberpfälzer Wald DLFF-0093  
Castle Plössberg DL-04900

This friday after work started into direction DLFF-0093. Was last week printing the QSL-cards for the latest 4800 contacts from DP44WCA and searching for a way to transfer the cards to our QSL-manager. He is living in the area so had to choose a castle close to him this time to avoid unrentable trip.

So temperature was just about 5 degrees and heavy winds outside, so choosed again my standard location there beside a wood area where you can remain a bit protected, anyhow quite cool for the assembly.

Propagation soon appeared bad that day and closer areas were only readable with low signal strength. Started at 1336 with PD2GCM as first station and after a short appearance on 40 meter SSB changed the bands to 20 meter and later on 30 meter. 20 SSB was absolutely nothing. 20 CW generated the total highlight when ZL3CW was calling with 599 signal, incredible. Remember very well that time when Jacky (F2CW) was the operator at 3Y5X in 1985 which brought me close to the top-score in DXCC.

30 meter was also not so effective and later ended again on 40 meters CW and SSB. At the end of the operation a heavy blast brought my mast down which I didn't detect. When going out of the car, found the wires laying on the ground, so last contacts were done on a very low antenna-height :-).  
In total 243 contacts with 36 countries. 73 CW and 170 in phone.

Thanks for calling in and cu from the next one
