Castle Hohenberg DL-03142

After a longer period it was one of the first days which apparently has no big weather-troubles.

There were heavy winds announced but anyway it was time to test the first time my new christmas-birthday-easter-gift in reality, instead of looking on the box at home.

The first tests with very poor antenna-setup at home were very promising and the filters from the FT-DX10 worked extraordinary. Had the same question at the begin like many others. Either Icom IC-7300 or Yaesu FT-10DX.

However a long history with Yaesu starting with FT7, FT900, FT450, FT2000, FT-DX1200 finally brought me again to Yaesu.

Also all adapters, cable etc. could be used from the other transceiver.

So finally stepped out to the not so far away Eger- and Röslautal for the initial test.

I was at the same

Castle Hohenberg DL-03142

location like the last times, think the people in the nearby small village know my car meanwhile very well.

At 2 degrees it was not so funny but I used the simple 3band-hopper to break down quickly, if weather changes.

At the begin had some sunny moments however at the end often periods with rain and snowfall changed within minutes.

In total could work 287 contacts with 30 countries.

Top-countries this time:

1. Germany (102)
2. Italy (29)
3. Poland (21)
4. Netherlands (18)
5. France (14)

So remember to an activity from there where almost no german station made it into the log, so this time excellent condx on the short distance. So in this 4th activity from that location we could screw up the total number of contacts to 1101 since march 21 and 814 uniquehunter-points.

The transceiver performed excellent So some learning-curve is still needed, but with hopefully better temperatures we find more possibilities to train with it outside.

Thanks for calling in and cu from the next one
