Castle Friedenfels DL-02349

Just one day after the successful activity from Eger- und Röslautal, was again on the road, this time for an activation from a new one DLFF.

The Nature-Reserve Grenzbach u. Heinbach is winding along these two small streams across the naturepark Steinwald.

This time however had a big mistake in the planning.

The weather was really impressive good compared with the last weeks, however I had overseen the

line in the announcements about the dutch contest. I had seen the CQ-WPX-RTTY, however thought that shouldn't be a problem.

The 40 meter band was full from the begin until the end. After searching several minutes found around 7.179 a place where the peak was not so high.

After a few minutes calling really the first station found me, after the following announcements in the cluster a lot of stations were coming in.

Used the chance also to give the dutch stations calling in a point for their contest score and so had a nice and busy afternoon.

Of course when moving to another frequency it always

took long time until somebody found you again, however thats normal in contest-activities.

So again also a nice chance for the FT-DX10 to show the possibilities under extreme working conditions and the result was pretty nice.

Sun was shining at the begin, however temperature never came much higher than 3 degrees.

When turning down the antenna the full moon ap-

peared on the horizon and the temperature went down till 0 degrees.

Location was about 500 meters away from the castle Friedenfels DL-02349.

304 contacts with 29 different countries could be done, 53 out of them in telegraphy. In my next activity from there will concentrate more on 20 and 30 meters to give more DX-stations a chance.

Thanks for calling in and cu from the next one
